About this project
About PC Parts POS
PC Parts POS is a foundational web application developed with Laravel for IT0049 — Web System Technologies.
This TFA6 version replaces the static PHP arrays from TFA5 with MySQL migrations, a seeder, Eloquent models, and database-backed Customer Accounts and User Accounts pages.
Learning goals
Practice Laravel migrations, database seeding, Eloquent models, controller-to-view data flow, and Blade loops.
Developer: Lance Kevin Famoleras
